

Session 1: Digital Literacy Basics

Level: Comprehensive Basics (Junior Secondary)

Topic: Computers, Operating Systems, Files & Folders

Date: _____

1. Teacher's Guide Page

NEXTGEN INNOVATE @ SCHOOL

Emerald Codelines – Teacher Session Plan

Duration: 60 minutes

Materials Needed: Computers/laptops (one per 2-3 students), projector, whiteboard, printed student notes & exercise sheets.

Learning Objectives

- Students will identify main parts of a computer and basic operating system functions.
- Students will understand files, folders, and how to organize digital information.
- Introduce safe internet usage for learning.

Session Breakdown

1. **Warm-Up (10 mins):** Ask students: "What devices do you use daily that are computers?" Discuss phones, laptops, etc. Show basic computer parts diagram.
2. **Main Teaching (20 mins):**
 - Explain operating systems (e.g., Windows, Android – like the "brain" that runs the computer).
 - Demo: Open desktop, show files & folders. Explain saving, organizing (create a new folder together).
 - Discuss internet for learning: Safe searching tips.
3. **Hands-On Activity (20 mins):** Guided practice – Students create a folder named "My Tech Class", save a simple text file inside.
4. **Wrap-Up & Review (10 mins):** Quick Q&A, assign exercise sheet as classwork/homework.

Teaching Tips

- Use simple language; relate to everyday examples (e.g., folders like school bags).
- Monitor for understanding – pair stronger students with others.
- Assessment: Observe participation and check exercise sheets next session.

Next Session Preview: Online searching and digital etiquette.

Class Session Note – Session 1

Level: Basics

Topic: Getting to Know Computers, Files & Folders

Date: _____

Hello Innovators! Today we start our coding and robotics journey with the basics of computers.

Learning Goals

By the end of class, you will:

- Know the main parts of a computer
- Understand what an operating system does
- Create and organize files & folders

1. Parts of a Computer

Here are the basic parts:

(Common parts: Monitor/screen, Keyboard, Mouse, CPU/tower – the brain!)

2. What is an Operating System (OS)?

- The OS is software that controls the computer (examples: Windows on laptops, Android on phones).
- It helps you open programs, save files, and connect to the internet.

3. Files & Folders

- A **file** is like a single sheet of paper (e.g., a photo, document, or video).
- A **folder** is like a bag that holds many files to keep things organized.

Step-by-Step: Create Your First Folder

1. Right-click on the desktop.
2. Choose "New" → "Folder".
3. Name it "My Coding Class".
4. Open it and create a text file inside (tell a short story about yourself!).

Quick Tip: Always save your work in folders – it makes finding things easy!

Class Activity: Follow the teacher's demo to make your folder.

Emerald Codelines – NextGen Innovators!

3. Exercise Page

NEXTGEN INNOVATE @ SCHOOL

Exercise Sheet – Session 1

Name: _____ **Class:** _____ **Date:** _____

Part A: Multiple Choice

1. What is the "brain" of the computer called?
a) Monitor b) Keyboard c) CPU d) Mouse
2. An operating system helps you:
a) Only play games b) Control the computer and open programs c) Eat food d) Draw on paper

Part B: Label the Diagram

(Teacher will show or print the diagram – label these parts:)

- Screen: _____
- Keyboard: _____
- Mouse: _____
- CPU: _____

Basic parts of a Computer

Part C: Short Answer

1. What is a file? Give one example: _____
2. What is a folder? Why do we use folders? _____

Part D: Hands-On Task (Do on Computer)

- Create a folder on desktop named "Basics Session 1".
- Inside it, create a text file named "About Me.txt".
- Write 3 sentences about why you joined this class.
- Save and show your teacher!

Bonus Challenge: Find and open the "Pictures" folder on the computer. How many files are inside?

Well done! Bring this completed sheet next class.

Emerald Codelines – Keep innovating!
