

✓ LEVEL 1 – Basic ELSE IF

🎯 **Goal: Check if an employee is salaried or not.**

```
DECLARE @EmployeeID INT = 1
DECLARE @IsSalaried BIT

SELECT @IsSalaried = SalariedFlag
FROM HumanResources.Employee
WHERE BusinessEntityID = @EmployeeID

IF @IsSalaried = 1
    PRINT 'Employee is salaried.'
ELSE IF @IsSalaried = 0
    PRINT 'Employee is hourly paid.'
```

📄 *Simple comparison using `ELSE IF` with a `BIT` value.*

✓ LEVEL 2 – Intermediate ELSE IF

🎯 **Goal:** Check a person's title (Mr., Ms., etc.) and print a message.

```
DECLARE @PersonID INT = 1
DECLARE @Title NVARCHAR(8)

SELECT @Title = Title
FROM Person.Person
WHERE BusinessEntityID = @PersonID

IF @Title = 'Mr.'
    PRINT 'Hello Sir!'
ELSE IF @Title = 'Ms.' OR @Title = 'Mrs.'
    PRINT 'Hello Ma'am!'
ELSE IF @Title IS NULL
    PRINT 'No title found for this person.'
```

📖 Demonstrates string comparison with `ELSE IF` and handling `NULL`s.

✓ LEVEL 3 – Advanced ELSE IF with Date Logic

🎯 **Goal:** Check how old a sales order is and print a message.

```
DECLARE @SalesOrderID INT = 43659
DECLARE @OrderDate DATE
DECLARE @DaysOld INT

SELECT @OrderDate = OrderDate
FROM Sales.SalesOrderHeader
WHERE SalesOrderID = @SalesOrderID

SET @DaysOld = DATEDIFF(DAY, @OrderDate, GETDATE())

IF @DaysOld <= 7
    PRINT 'Recent order (within the last week).'
ELSE IF @DaysOld <= 30
    PRINT 'This order is from this month.'
ELSE IF @DaysOld <= 365
    PRINT 'This order is from earlier this year.'
ELSE IF @DaysOld > 365
    PRINT 'This order is more than a year old.'
```

📖 Uses `DATEDIFF` and multiple `ELSE IF` conditions with numeric ranges.

💡 Teaching Tip:

For practice, you can ask students to:

- Change the IDs to test different records.
- Add `ELSE` blocks for handling missing records.
- Use `PRINT`, `SELECT`, or even `THROW` for invalid values.
