

Learning Material for Session 1: PinkScribe Web App Development

Date: Monday, August 18, 2025

Time: 5:00 PM - 6:30 PM WAT

Session Focus: Introduction to Web Development Basics and Project Setup

Prepared By: [Your Name/Mentor Name]

Objective: Kick off the PinkScribe project by setting up the development environment and learning foundational web development concepts using HTML and PHP.

Session Agenda (1.5 Hours)

- **Review Bottlenecks (15 min):** N/A (First session - no prior tasks)
- **Teach & Initiate Next Step (60 min):** Introduction to web development and project setup
- **Assign & Discuss (15 min):** Class work and project tasks

1. Teach & Initiate Next Step (60 min)

Learning Concepts

This session introduces the basics of web development and sets up the foundation for the PinkScribe project based on the provided Product Requirements Document (PRD).

1.1 Introduction to Web Development

- **What is Web Development?**
 - Web development involves creating websites or web applications. It includes front-end (what users see) and back-end (server-side logic).
 - For PinkScribe, you'll combine HTML (structure), CSS (styling), a bit of JavaScript (interactions), and PHP (server-side processing).
- **Overview of PinkScribe (from PRD):**
 - A beginner-friendly web app where users upload audio files (MP3/WAV, max 10MB) and get instant text transcription.
 - Main purpose: Practice PHP while learning to integrate it with HTML, CSS, and JavaScript, and use a speech-to-text API.
 - Goals: Strengthen PHP skills, learn front-end basics, integrate APIs, and create a fun project.

1.2 Setting Up the Development Environment

- **Tools Needed:**
 - **XAMPP:** A local server environment (Apache, MySQL, PHP). Download from apachefriends.org.
 - **Text Editor:** VS Code or any preferred editor.
 - **Browser:** Chrome or Firefox for testing.
- **Steps to Install XAMPP:**
 - i. Download and install XAMPP.
 - ii. Start Apache and MySQL modules from the XAMPP Control Panel.
 - iii. Verify by opening `http://localhost` in your browser (should show XAMPP dashboard).
- **Project Folder Setup:**
 - Create a folder named `PinkScribe` inside `C:\xampp\htdocs\` (Windows) or `/opt/lampp/htdocs/` (Linux/Mac).
 - Inside `PinkScribe`, create `index.php` (main file) and a subfolder `uploads` for audio files.

1.3 Basic HTML Structure

- **HTML Basics:**
 - HTML (HyperText Markup Language) defines the structure of web pages.
 - Key tags: `<html>`, `<head>`, `<body>`, `<form>`, `<input>`.
- **Demo Example:**

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>PinkScribe</title>
</head>
<body>
  <h1>PinkScribe ❤️</h1>
  <form method="POST" action="index.php">
    <input type="file" name="audioFile">
    <input type="submit" value="Transcribe">
  </form>
</body>
</html>
```

- Save as `index.php` in the `PinkScribe` folder.
- Open `http://localhost/PinkScribe` to see the form.

1.4 Introduction to PHP

- **What is PHP?**
 - A server-side scripting language for dynamic web content.

- Processes form data and interacts with APIs in PinkScribe.

- **Basic PHP Syntax:**

- Use `<?php` to start and `?>` to end PHP code.
- Example: Echo text with `echo "Hello, World!";` .

- **Demo with Form:**

- Add PHP to `index.php` to handle the form:

```
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    echo "Form submitted!";
}
?>
```

- Test by submitting the form (should display "Form submitted!").

Hands-On Demo

- Walk through installing XAMPP, setting up the `PinkScribe` folder, and creating the basic `index.php` with HTML and PHP.
- Show how to access it via `http://localhost/PinkScribe` .

2. Assign & Discuss (15 min)

Class Work (1-2 Hours)

- **Task:** Create a simple HTML page with a form.
 - Include a text input for a user's name and a submit button.
 - Add a PHP script to process the form and display "Hello, [name]!" on the same page.
 - Steps:
 - Create a new file `hello.php` in the `PinkScribe` folder.
 - Use the HTML form structure from the demo, replacing the file input with a text input (`<input type="text" name="name">`).
 - Add PHP to check if the form is submitted and echo the greeting.
 - Test in your browser and log any issues.

Project Task (3-5 Hours)

- **Task:** Set up the `PinkScribe` project and build the basic HTML upload form.
 - Steps:
 - Ensure XAMPP is running and the `PinkScribe` folder is set up.
 - Update `index.php` with the demo HTML form for audio upload (file input for MP3/WAV, "Choose File" and "Transcribe" buttons).

- c. Add a simple PHP echo to confirm form submission (e.g., "File received!").
- Test by uploading a sample audio file and logging the setup process, including any errors.

Resources

- **Tutorials:** W3Schools HTML (<https://www.w3schools.com/html/>) and PHP (<https://www.w3schools.com/php/>).
- **XAMPP Guide:** [Apache Friends Documentation](#).
- **Support:** Email [teacher email] or chat for mid-week help.

3. Logbook Guidance

- **Entry for Today:**
 - Notes on XAMPP installation and setup.
 - Code snippets from `index.php`.
 - Challenges faced (e.g., server errors) and time spent.
- **Tip:** Log daily to build a comprehensive record for the next 2 months.

Next Session

- **Date:** Wednesday, August 20, 2025, 5:00 PM - 6:30 PM WAT
- **Focus:** Review Class Work 1 & Project Task 1, teach PHP form processing and JavaScript basics.

Note: This material aligns with the PRD's Week 1 task (set up PHP project folder & HTML form) and prepares you for hands-on development. Enjoy building PinkScribe! 💖
